About SYNlawn

All SYNlawn products are proudly Made in Australia by APT (Advanced Polymer Technology) Asia Pacific in Dandenong South, Melbourne. Founded in 1994, APT Asia Pacific is the leading manufacturer of synthetic turf products for sporting, recreational and landscaping applications. APT Asia Pacific is the only manufacturing plant in Australia that makes synthetic turf yarn.

APT yarns have inbuilt proprietary features not found in any other yarns. They are purpose suited to Australasian conditions, manufactured with ISO quality assurance, proven by continuous testing, and backed by a generous Warranty.

Australian Manufacturer Warranty

All SYNlawn products come with a standard Manufacturer's Warranty of up to 15 years (depending on the product). Our Warranty protects customers against issues such as ultra-violet degradation and fibre loss.

We offer a simple and supportive Warranty Claim process. A claim may be lodged anytime during the Warranty period, by notifying us in writing as soon as possible. Within 15 days of notification, one of our SYNlawn representatives will arrange a time for a joint inspection to fairly assess the claim. If the claim is approved, SYNlawn will happily replace the product to the same or equal value.

Our Customer Service and Sales staff are available at all times to offer advice and assistance on the care and maintenance of all surfaces. Should you require more information on our Manufacturer's Warranty please contact our Customer Service team on 1300 796 529.

Coolplus® technology

All SYNlawn products feature proprietary infrared-reflective COOLplus sports yarn technology, which reduces the surface temperature by 10-20% compared to competitor products.

Sunlight is comprised of a wide spectrum of radiation including visible light, UV radiation and infrared (IR). Infrared radiation causes molecular vibration, which translates into heat energy when it is absorbed by an object.

Our proprietary COOLplus yarn technology does not absorb infrared rays, translating into less molecular vibration and cooler surface temperatures.

Our COOLplus technology also creates more of a matte finish to the synthetic fibres, reducing the often shiny appearance of artificial grass. Our premium surfaces are also softer to touch and less abrasive than other artificial grasses.

Child-safe

All SYNLawn products are free of unsafe chemicals and are soft to touch and play on. We specialise in supplying and installing artificial grass for schools, child-care centres and playgrounds.

We offer soft shock pad underlay when installing the grass for added cushioning and protection.

Pet-Friendly

All of our products are safe and pet-friendly. Soft under paw, toxic-free and incredibly durable, they are designed to withstand even the most active of pets!

Our safe odour-eliminating infill and spray system keeps unpleasant pet waste and ammonia smells under control. And liquid drains right through the synthetic pile with no pooling, which means no brown stains, mud or puddles.

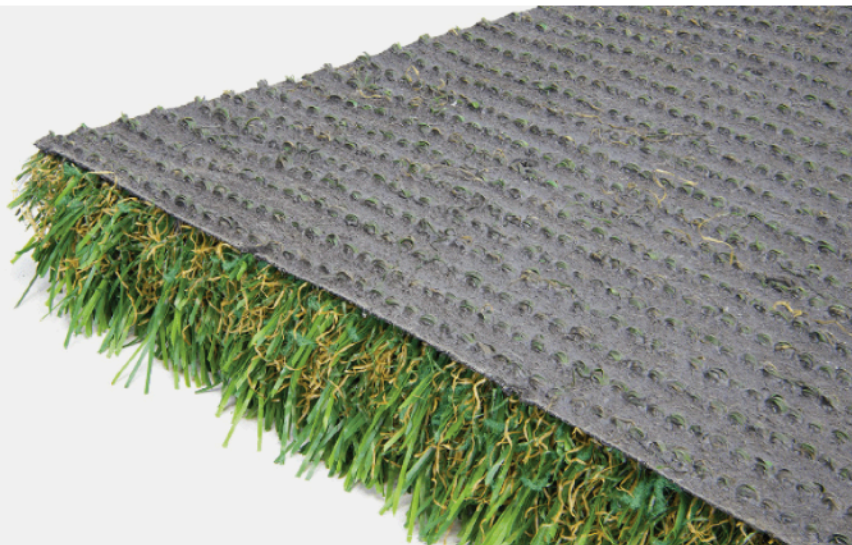

Of course, maintenance is still required to keep your artificial grass looking it's best and to ensure longevity. See our SYNLawn Maintenance Guide for more information.

Superior Drainage

Let it rain! Water (or any other liquid) drains right through our surfaces at a rate of 2000mm per hour.

The punch hole system on the backing of our surfaces quickly allows water to pass through the pile into the ground below, preventing growth of mould and bacteria.

UV Stabilised

SYNLawn products are specifically designed and Australian Made for Australian conditions.

That means protecting against the harsh Australian UV rays.

Other inferior quality grasses may not provide protection against fading from intense sunlight and weathering nor might they provide a Warranty.

Our premium quality yarns and surfaces all come with an up to 15 Year Warranty to protect you against UV fading, so you can feel confident that you have chosen the best synthetic grass on the market.

KEY BENEFITS:

- Combines multi-coloured 30mm synthetic grass blades with PE monofilament with PP texturised monofilament thatch of natural colours
- Field green/olive green with green/beige thatch OR dual tone green with multicolour sub-pile
- **Coolplus®** technology
- A soft touch medium-high weight landscaping solution
- Perfect for pets, ideal for residential, play areas, commercial areas and perfect for premium spaces
- 3.71m wide roll | 10 year Warranty

CLASSIC SUMMER 30

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★☆

KEY BENEFITS:

- Combines multi-coloured 35mm synthetic grass blades with PE monofilament with PP texturised monofilament thatch of natural colours
- Field green/olive green with multicolour sub-pile
- **Coolplus®** technology
- A soft touch medium-high weight landscaping solution
- Perfect for residential, play areas, pets, commercial areas and premium spaces
- 3.71m wide roll | 12 year Warranty

CLASSIC SUMMER HD

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★☆

KEY BENEFITS:

- Combines multi-coloured 35mm grass blades with polypropylene thatch zone of natural colours
- Grass, olive, green and fawn
- **Coolplus®** technology
- Fire Rating AS/ISO 9239.1-2003
- A soft touch medium-high weight landscaping solution
- Suitable for residential, play areas, pets and commercial areas, perfect for premium spaces
- 3.71m wide roll | 12 year Warranty

CLASSIC 35

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★☆

KEY BENEFITS:

- Combines multi-coloured 45mm grass blades with polypropylene thatch zone of natural colours
- Grass, olive, green and fawn
- **Coolplus®** technology
- A soft touch high weight landscaping solution
- Perfect for pets, ideal for residential, play areas and commercial areas, perfect for premium spaces
- 3.71m wide roll | 15 year Warranty

CLASSIC 45

SOFTNESS ★★★★★★
WEAR RATING ★★★★★★

KEY BENEFITS:

- Combines multi-coloured 30mm artificial/synthetic grass blades with PE monofilament with PP texturised monofilament thatch of natural colours
- Field Green/Beige with brown sub-pile
- **Coolplus®** technology
- Creates a soft touch medium-high weight landscaping solution
- Perfect for pets, ideal for residential, play areas, commercial areas, extremely high wearing product
- 3.71m wide roll | 12 year Warranty

COMFORT PLUS

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★★

KEY BENEFITS:

- Combines multi-coloured 50mm artificial/synthetic grass blades with PE monofilament with PP texturised monofilament thatch of natural colours
- Field green/olive green with green/beige thatch
- **Coolplus®** technology
- Creates a soft touch medium-high weight landscaping solution
- Perfect for pets, ideal for residential, play areas, commercial areas, extremely high wearing product
- 3.71m wide roll | 15 year Warranty

COMFORT ELITE

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★★

KEY BENEFITS:

- Classic GT is an environmentally-friendly multi-coloured 40mm artificial/synthetic grass
- Utilising Green Technology (GT) is made from 60% renewable resources (sugar cane)
- **Coolplus®** technology
- A soft touch, high weight landscaping solution
- Ideal for residential, pets, play areas and commercial areas
- 3.71m wide roll | 15 year Warranty

CLASSIC GT

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★☆

KEY BENEFITS:

- Combines multi-coloured 40mm artificial/synthetic grass blades with PE monofilament with PP texturised monofilament thatch of natural colours
- A mix of Field Green / Olive Green / Apple Green/Beige with multi-colour sub-pile
- **Coolplus®** technology
- Creates a soft touch medium-high weight landscaping solution
- Perfect for pets, residential, play areas, commercial and high wear areas
- 3.71m wide roll | 15 year Warranty

OMEGA

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★★

KEY BENEFITS:

- Coolplay is a 23 mm texturised synthetic grass with heavy duty hybrid emulsion backing
- Available in a range of colours; green, gravel, blue, yellow and red
- **Coolplus®** technology
- Designed to cater for multiple line-markings on play areas
- Non-directional fibres are excellent for gym flooring
- Ideal for general purpose education areas, multisport/custom configuration areas and gymnasiums
- 3.71m wide roll | 5 year Warranty

COOLPLAY

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★★

KEY BENEFITS:

- 20mm texturised artificial grass blades with non-directional characteristics that provides a soft and realistic putting surface
- Natural green look
- **Coolplus®** technology
- Creates a realistic putting 'speed' with minimal maintenance
- Perfect for premium putting surfaces, ideal for residential, play areas and commercial areas
- 3.71m wide roll | 8 year Warranty

ROYAL GREEN

SOFTNESS ★★★★★☆
WEAR RATING ★★★★★★

SYNLawn Installation

Installing SYNLawn artificial grass can be an easy and fun DIY project. By following these instructions, you can create a beautiful, low-maintenance and environmentally-friendly landscape that you enjoy all year round.

If you are not confident at installing the grass yourself or your installation area is greater than 25sqm, we highly recommend using a SYNLawn Certified Installation Professional. Large installations can be very labour-intensive and often require specialised skills. Contact SYNLawn on 1300 796 529 to find your nearest Installation Professional. We have Professionals available Australia-wide.

Before installing your SYNLawn artificial grass, make sure you have all the equipment required, as listed:

SPECIALTY TOOLS NEEDED

- Everseal adhesive tape (5LM or 20LM)
- 150mm flat head nails or landscape pegs
- Turf rake (for bristle fibres)
- Sand spreader
- Vibrating plate (hire)
- Dried silica sand

COMMON TOOLS NEEDED

- Stanley knife
- Hammer
- Yard rake
- Shovel
- Wheelbarrow
- Tape measure
- Wide shop broom

1.

Prepare the base

Excavate the area to a depth of 80mm. Lay 80mm of crushed rock/road base and compact it with a vibrating plate. The level of crushed rock/road base when compacted should be 15-20mm below "finished height" of surrounding edging/paving.

2.

Trim to size

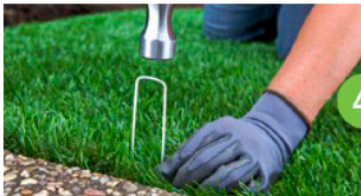

Lay your artificial grass, making sure you start from one edge and roll out. Cut the over-hanging quantities with a sharp stanley knife. Remove the "salvage" or black strip from both sides of the grass. This cannot be used to join the grass.

3.

Glue seams together

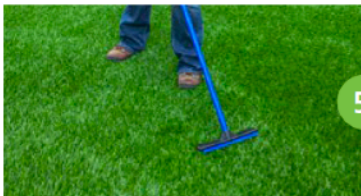

When joining rolls of grass together, be sure to use Everseal adhesive tape along the seams. Lay the silver backing of tape down on the crushed rock/ base with the white side facing up. Place the two pieces of grass onto the tape, with each edge placed evenly in the centre of the tape. Remember to put pressure onto the seams once the grass has been joined to promote good adhesion.

4.

Secure in place

Once you have covered the complete area, nail all of the perimeters down at 500mm intervals using flat head nails or landscape pegs.

5.

Groom your grass

Using a sand spreader, top dress the grass with an even distribution of dried silica sand fill to a depth of 15-20mm. A yard broom can be used at this stage to sweep in the sand evenly and to also brush the grass blades straight.

IMPORTANT:

- Do not attempt to lift the grass by yourself. It is advised that the rolls be cut into manageable lengths before moving.
- Always run grass in the same direction.
- Refer to the Product Specification sheet for recommended amount of infill required.
- This installation information has been supplied as a reference guide only. SYNLawn Warranties do not cover installation.

SYNLawn Maintenance

Whilst the upkeep of artificial grass is not as time-consuming and costly as natural grass, it does still require a little maintenance, often.

SETTLEMENT It will take 2-3 months for your new artificial grass to settle and reach its optimal condition. During this period the infill materials penetrate the fibre pile and settle into the turf structure. Light grooming, using a medium soft bristle brush, on a regular basis, will help the pile remain upright and aid infill settlement.

BRUSHING The main reason for brushing is to stimulate the top fibres of your artificial grass, helping them to remain vertical. We recommend light brushing at least once every month and performed in multiple directions.

Some infill may appear on the top of your artificial grass from time to time. Light brushing will settle it back down.

DEBRIS Debris should be removed from your artificial grass on a regular basis to prevent organic matter building up in the turf structure. We recommend debris removal at least once every week and can be performed with a leaf rake and shovel, leaf collecting device such as Aussie Clean Sweep or a mechanical blower. Debris build-up may affect the drainage capabilities of your artificial grass system and encourage weed growth.

ANIMAL WASTE Animal waste should be removed from your artificial grass as soon as you find it and the area washed down with a warm soapy solution such as household washing liquid, should it be required. The waste will not damage your artificial grass, but will work its way into the artificial grass structure if left for too long.

STAIN REMOVAL Most stains can be removed from your artificial grass with warm soapy water using household washing liquid.

Heavy oil marks can be removed using mentholated spirits and a cloth. Remember to wash down the cleaned area with water to dilute the spirit residue.

BURNS For superficial burns on your artificial grass, carefully clip the pile with scissors just below the blackened or melted tips. For large deep burns you may need to replace that section of artificial grass. A SYNLawn Certified Installation Professional will be able to assist.

TREATMENT If you do start to see moss, algae or weeds growing on or in your artificial grass, we recommend using the following products:

- **Weeds:** Round Up/Zero – this compound is used to control broad leaf weeds and annual grasses. Apply in a wand-like motion directly onto the leaf. Do not spray directly onto it.
- **Moss/Algae:** Wet and Forget - it has a unique combination of biodegradable selective surfactants for moss, mould and gunge removal on any exterior surface.

Please remember to remove all dead matter including roots and sweep debris off the turf.

VEHICLES Only light vehicles under 1 tonne, fitted with wide, low-pressure tyres (8 to 10psi) should be allowed on your artificial grass.

TAKE CARE We recommend avoiding the use of the following items on your artificial grass:

Glass, tin or ceramics: Broken sharp objects can bury themselves into the turf structure and potentially cause injury or damage to you and your artificial grass.

Cigarettes or hot surfaces: Although your artificial grass has a fire safety rating, open flames and hot items may melt the fibre pile.

Chewing gum: It can be removed by freezing the gum and chipping it off the surface. However it is recommended to avoid having chewing gum on the grass.
